This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A consumer apparatus responsive to a user-input for initiating retrieval of data from a server under control of a predetermined URL or an identifier therefor associated with ~~specific to a type of~~ the apparatus, the data representing content information about the context of usage of the apparatus.

2. (Currently Amended) The apparatus of claim 1, the consumer apparatus configured for use and inclusion on a home network and having ~~comprising~~ an Internet-access functionality through the home network, the predetermined URL or identifier therefor being stored on the home network.

3. (Currently Amended) The apparatus of claim 1, comprising a memory for storage of the URL or identifier therefor.

4. (Original) The apparatus of claim 1, wherein:
    - the apparatus has a remote control device; and
    - the device has a dedicated button for initiating the retrieval of the data.

5. (Currently Amended) A proxy device for representing an apparatus on a home network, wherein the proxy is responsive to a user-input for initiating, via a gateway, retrieval of data from a remote server under control of a predetermined URL or identifier

therefor associated with ~~specific to a type of~~ the apparatus represented, the URL or identifier therefor being stored on the home network.

6.   (Original) The proxy of claim 5, wherein the data represents content information about the context of usage of the apparatus.

7.   (Currently Amended) The proxy of claim 5, storing the URL or identifier therefor.

8.   (Currently Amended) The proxy of claim 7, wherein the URL or identifier therefor is programmable.

9.   (Original) The proxy of claim 5, responsive to a wireless signal.

10.   (Original) The proxy of claim 9, for transmitting a further signal with a unique identifier upon receiving the signal.

11.   (Currently Amended) A remote control device for control of a consumer apparatus included on a home network, wherein:

        - the device has a key dedicated to initiating, via the apparatus, retrieval of data from a server based on a predetermined URL or identifier therefor associated with the apparatus and stored on the home network; and

        - the data represents content information specific to the context of usage of the apparatus.

12.   (Original) The device of claim 11, storing an identifier representative of a URL of a file at the server.

13.   (Currently Amended) A method of enabling a service provider to provide a service via the Internet to a user of a consumer apparatus having a predetermined identifier associated therewith, the identifier being stored on a home network including the apparatus, the method comprising:

    - enabling the user to initiate via the apparatus sending of a request with the an identifier representative of a type of the apparatus to a server on the Internet; and

    - upon receipt of the request by based on the identifier, the server initiating user access to a web page with content information about a context of using the apparatus.

14. (Original) The method of claim 13, comprising creating a data base of the type per user.

15. (Currently Amended) The method of claim 13, comprising creating a data base of URLs or identifiers therefor per user.

16. (Currently Amended) The method of claim 13, comprising providing the apparatus with an URL or other identifier for a web page.
